CORN HYBRIDS

USA 1003 Conventional Agrisure[®]GT

100 days

New for 2014. Replaces 1001. It has the same great emergence rating, so it is great for no-till and early planting. It has consistent high yields on varying soil types. This hybrid has a medium tall plant with a medium ear height. It has first rate stalks and roots with a semi-flex ear. Its gray leaf resistance gives it a top notch health and stay green. It responds to higher population and good fertility. It's for the grower who is going for the highest yields.

USA 1014 Conventional

101 days

Formerly Experimental 4246. This hybrid has been tested for several years and has a proven high yield performance every year. It has very good grain quality with good ear flex which makes it widely adapted to varying populations and soil types. It is medium tall with strong roots. It has a high test weight with a medium ear height. Its good disease rating gives it good standability and staygreen late into the fall

USA 1018 Conventional

101 days

It has a tall plant and good staygreen characteristics. Its excellent drought tolerance and good stalk strength makes this hybrid a strong yield performer.

USA 1056 Conventional Agrisure[®]Viptera[™] GT 3111 LIBERTY LINK[™] Agrisure[®]GT

105 days

A 208 type hybrid with more yield and standability. It has a long flex- ear with dark green foliage. Excellent choice for no-till and early planting. It is widely adapted to handle a variety of management situations which ensures consistent performance. Its disease resistance and tolerance gives it excellent plant health. Good dual purpose hybrid for grain or silage. 1056 is also available in Agrisure GT 3111, a Quad Stack for glyphosate, Liberty Link, Corn Borer, Root Worm and Earworm.

USA 1073 Conventional

107 days

Formally exp. 8011. This hybrid has had outstanding performance under high stress situations. Its great cold soil emergence rating and early seedling vigor gives it quick canopy closure. With its sturdy stalks and roots, it fits in top management situations with high populations. This along with a flex ear, makes it widely adapted to varying population and soil type.

USA 1081 Conventional

108 days

This new genetics has a semi flex ear with a medium to tall plant and a medium to high ear placement. Its good stalks and roots give it good standability. It has a high test weight.

USA 1093 Conventional

109 days

Formerly exp. 3714. This variety fits a broad area of agronomic adaptation; fits all soil types. It has a fixed ear, so requires a high plant population which also means it would take a lot of stress to cause blanks. It a fairly tall plant, but has a medium ear placement. Very good stalks and roots and very good disease tolerance to the major corn diseases, including Gray Leaf Spot. This all leads to an easily harvested variety with no down corn.

USA 1112 Conventional

111 days

This hybrid has consistent yield performance across several years. It has deep kernels on a semi-flex girthy ear. It's widely adapted to soil type and population. It's disease resistant, and has very good late season standability. It has very good seedling vigor for use in no-till and early planting. It has medium plant height and ear height which also contributes to good standability. For drought tolerance, it's very good.

USA 1095 Conventional

109 days

This is a new high yielding conventional hybrid where traits could be added as needed. It has very good stalks and roots and stays healthy well into harvest. It is medium height with a girthy ear and deep kernels. This hybrid will take high population on good soils. It has a high test weight with 18 - 20 kernel rows. It has great Gray Leaf Spot and Northern Leaf Blight Tolerance.

USA 1139 Conventional

113 days

A full season high yield performer with food grade quality grain. It's broadly adapted from east to west. This hybrid has strong overall agronomics with above average stalk, roots and late season health. Its best performance is in high yield environments. It has a semi-flex ear with an excellent test weight. It's a tall hybrid which will make it a good silage corn.

USA 1107 Conventional Roundup Ready[®] 2 Corn

Genuity[®] VT Triple PRO[®]
RIB Complete[®]

110 days

This is an earlier version of 1145. It has the high yield but with a much better dry-down. It is excellent for no-till with very good emergence on a medium plant and ear height. It has a flex-ear and very good test weight and drought tolerance. It's disease rating is next to the highest.

USA 1141 Conventional Roundup Ready® 2 Corn

Genuity® VT Double PRO®
RIB Complete®

114 days
This high yielding hybrid has excellent test weight and grain quality. It is widely adapted throughout the corn-belt and also to lower or higher population. It has a large flex ear that has 16 to 18 rows on each ear. It has good disease resistance and good stalk and root. It has a medium plant height and stays intact well into the fall. With its low ear placement, all this leads to good standability.

USA 1145 Conventional Roundup Ready® 2 Corn

Genuity® VT Triple PRO®

114 days
A fuller season hybrid with big yields in the plots. This hybrid has a flex-ear so it is widely adapted to population. It can be planted at a lower population on lighter soils. Good for no-till and early planting. Has a very good drought tolerance and disease resistance. With its large ear it is a good one to show along the road.

ROUNDUP READY® CORN 2

With Roundup Ready Corn 2 technology growers can use Roundup Weathermax Herbicide over the top of U.S.A. RR Corn Hybrids to control more than 145 grasses, broadleaf weeds and vines. Roundup Weathermax provides faster plant uptake of the active ingredient leading to 30 minute rainfastness and same day tillage on annual weeds. The unique combination of the Roundup Ready Technology with Roundup Weathermax Herbicide provides corn growers with excellent weed control and crop safety. Grain from Roundup Ready Corn 2 no longer requires channelling.

Insect Resistance Management

Before opening a bag of seed, be sure to read and understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management**, for the biotechnology traits expressed in the seed as set forth in the Monsanto Technology/Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.

Monsanto Company is a member of Excellence Through Stewardship® (ETS). Monsanto products are commercialized with ETS Product Launch Stewardship Guidance, and in compliance with Monsanto's Policy for Commercialization of Biotechnology-Derived Plant Product in Commodity Crops. This product has been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying product. Excellence Through Stewardship® is a registered trademark of Biotechnology Industry Organization.

IMPORTANT IRM INFORMATION: Genuity® RIB Complete® corn blend products do not require the planting of a structured refuge except in the Cotton-Growing Area where corn earworm is a significant pest. See the IRM/Grower Guide for additional information. Always read and follow IRM requirements.

Roundup Technology® includes Monsanto's glyphosate-based herbicide technologies. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate.
